

Google Integration.

Bromcom has created a new feature within the Cloud-MIS that allows users to integrate data with Google Services seamlessly.

In order to have an effective digital strategy that will ultimately support school improvement goals, schools need to integrate more systems, platforms, and tools than ever before. More importantly, they need to make those connections work to their advantages and save teachers' time by offering a consolidated management software that does not require multiple operations to switch from app to app and manually transfer data from system to system.

Without integration, IT teams within the school would have to create Google accounts for all pupils and staff, create virtual classrooms and groups, and then assign users and permissions accordingly.

Account provisioning.

Bromcom provides account provisioning with the possibility of configuring an automatic synchronisation with Google Workspace. With this integration, the MIS will then automatically perform the creation and maintenance of a wide range of items. Not only does this save an enormous amount of time by getting rid of the various manual setups, but it also increases the level of information that can be utilised in the Google platform.

For example, creating new students' accounts and then assigning them into a class would normally create a lot of admin work. With Bromcom, this is automated, and besides, pupils can be linked to a range of subgroups, departments, subjects and so on. Teachers can view groups and subgroups, making it easier to assign appropriate course work or identify problematic areas.

Sync all users.

Your manual operations will significantly reduce because thanks to the integration, when users are entered or registered into the MIS platform, the system will automatically transfer the data and create the relative G Suite user. In the same way, it will also delete users from the G Suite when their details expire in the MIS (for instance, if a student leaves the school).

Import all your student and staff photos.

In the next major release (Due Q1 2021), Schools will be able access the Bromcom Live Assessment Benchmarking tool, allowing them to compare a range of datasets with a large pool of anonymised school data* from across the UK. Schools will be able to benchmark their performance from the moment results are entered on the system, comparing themselves with similar schools, locality, within a Trust and so forth.

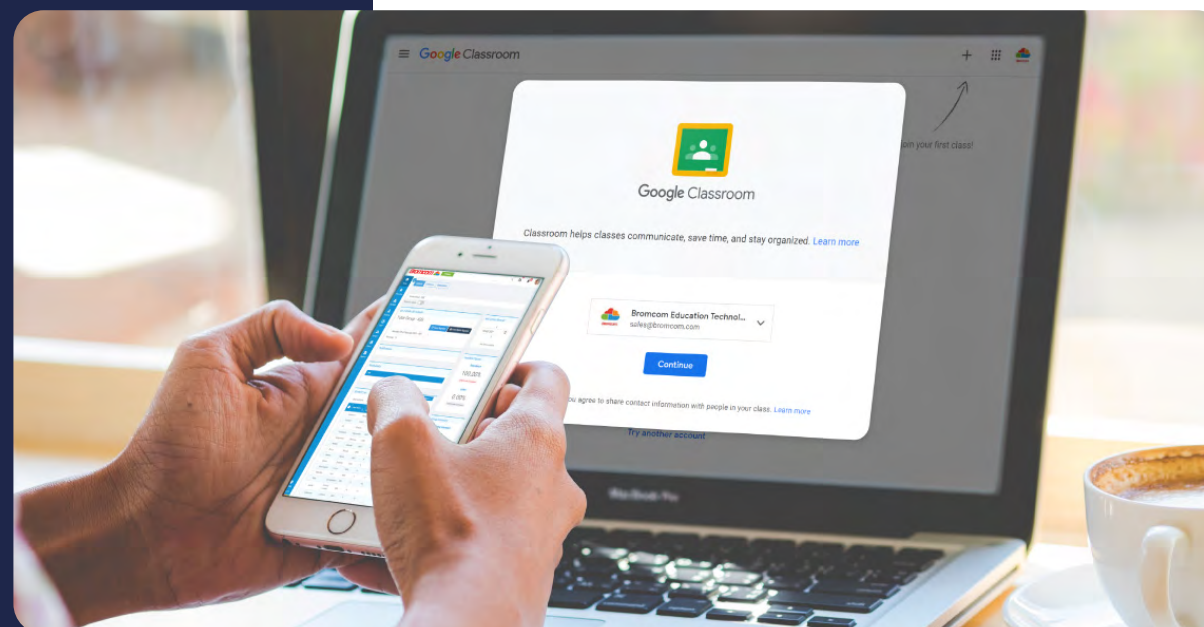

Sync calendars and timetables.

Once you populate your calendars with dates and events in your MIS, the information will automatically be viewed on the Google Calendar too, so that staff and students are always kept up to date.

Sync Google Classroom and Groups.

Students and staff can be automatically added from the MIS to the Google Classroom, saving you an enormous amount of time from copying and exporting details.

You can select which types of groups to create and define your own categories and hierarchies. For example, you can categorise email lists according to year group, or subject group etc. The groups are automatically updated without the need for extra manual admin to include or remove students or staff.

Single sign-on.

You will be able to use your G Suite user account to sign into Bromcom, so you won't have to remember different passwords or sets of credentials.

Book a demo and begin your journey.
